

A new version of R was created on the R CRAN website: version 3.6. It has a bug where the drop down menu for packages: install does not work. The solution is below.

Version 3.6.0 of R was launched on April 26, 2019. If you download a copy to your computer, you will need to use the following approach to install and load Rcmdr

Type the commands:

```
install.packages("Rcmdr", dependencies = TRUE)  
library(Rcmdr)
```

Alternatively, you can use version 3.5.3 on the remote server.
